

# Mr. Pill

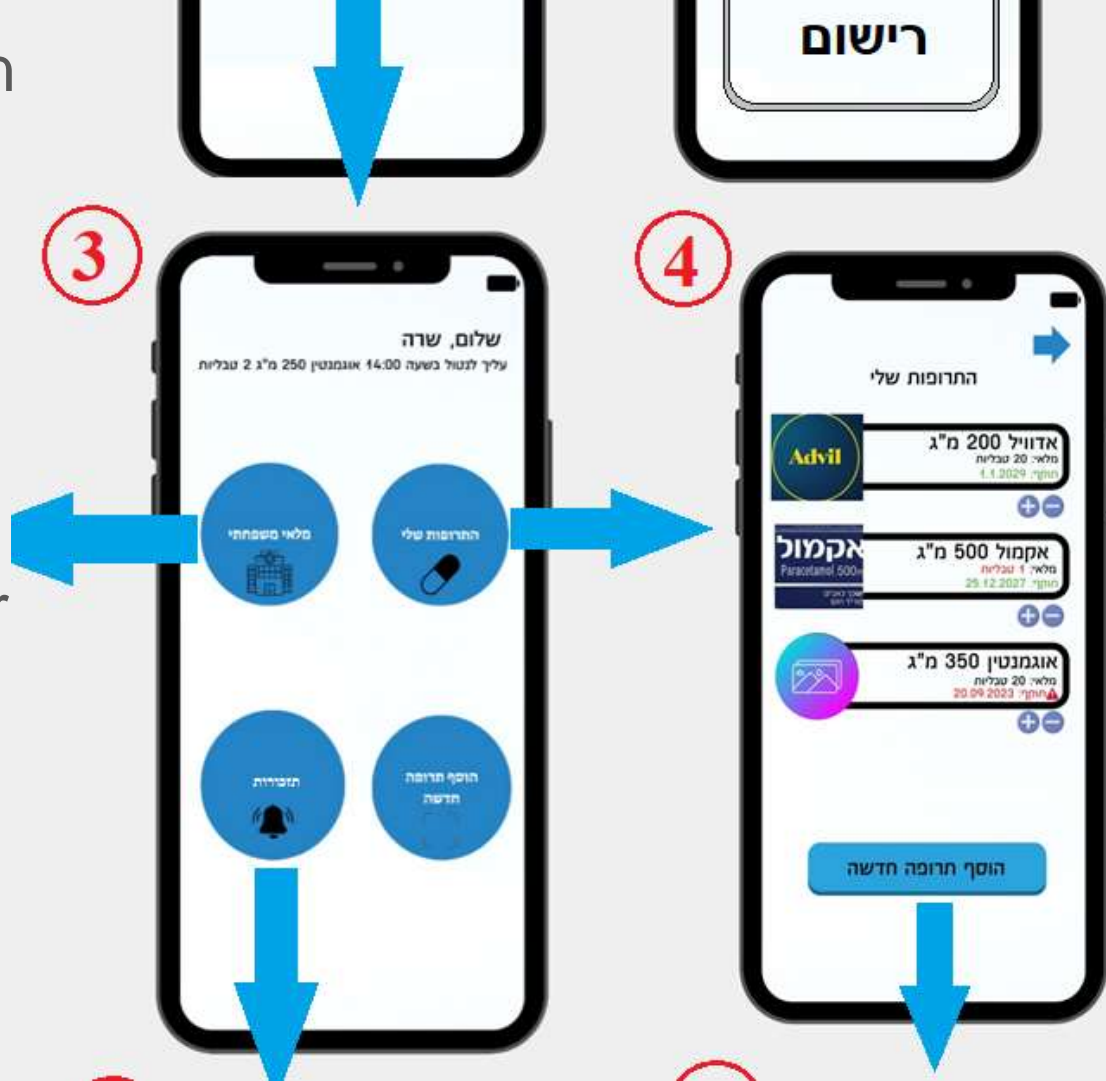

1) This is the welcome screen in the app as a new user with no saved login credentials.

1) A user signs up by entering their phone and accepting a code via SMS.

3) This is the home screen for a logged in user from which they can access their medicine supply, upcoming alerts, and make updates to those.

4) The user can track their list of available medical supplies. Clicking on an item from the list will present more information about the product.

5) When the user wants to add a new product to their list they could add it manually by name, or scan the barcode on the product with their phone camera.

Barcode and other medical product informations will be updated automatically according to the Ministry of Health in Israel.

6) The user will then be prompted to confirm that the correct medicine has been selected.

7) The user will be asked for more information about the product to finalize the addition to the list.

Stock numbers will be automatically deducted in assumption that the user will ingest their medicine on schedule.

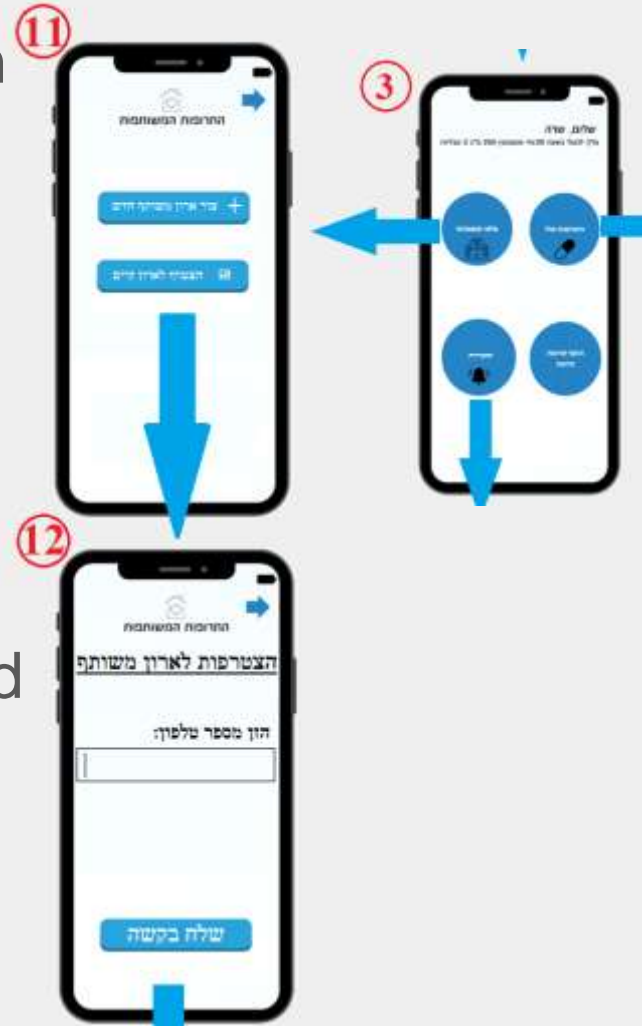

8) When the user has medicine in their virtual cabinet, they can set a reminder which will pop a notification on time. The reminder menu can be accessed from the main menu (3).

9) New reminders can be created through the reminder menu. Reminders can also be created for medicines from shared virtual cabinets. This way, caregivers can be granted access to their patient's virtual cabinet, maintaining and keeping track of it.

11) From the main menu (3), the user can reach the shared cabinets menu, from which they can create a new shared cabinet instantly and name it, or ask to join an existing one.

12) When asking to join an existing virtual shared cabinet, a request will be sent by phone number through the Mr.Pill app and will need to be accepted by the receiving user explicitly.

13) Once granted access to one or more shared virtual cabinets, the user would be able to view or edit the cabinet according to the permissions given to them by the owner.

14) Upon entering the app, a shared cabinet owner with a pending request will be asked to accept or deny the request, and it is up to the owner to decide which cabinet to add the requesting user to, and which permissions to give them.

This is the core functionality of the Mr.Pill application, that could help streamline the work of parents and caregivers, and also of the average Joe, who all could benefit from the tools existing in the digital domain for arrangement and management of medicine.
